New Outpatient Clinics at Kingston Hospital

1. Acute Kidney Injuries & General Nephrology for Adults

We have started this consultant led clinic with a view to improving the acute and chronic kidney injury services at Kingston Hospital. In addition we will see any general nephrology patients and this clinic will run in parallel to existing general nephrology clinics.

Criteria: The clinic is designed to see patient's with rapidly deteriorating renal function but will see all types of patients who needs to be seen by a Renal Consultant. This include patients with proteinuria, heamaturia (non-urological) Chronic Kidney Disease, Nephrotic, Nephritic Syndrome and resistant hypertension.

This clinic does not see renal transplant patients, renal calculi, and renal tumours of any nature. If the patient needs dialysis or has urgent renal transplant issues they need to be referred to the Renal Unit, St. Georges Hospital.

Other Information: Working alongside the St. Georges Renal Unit, patients will be referred as appropriate to St George’s directly if determined that the patient needs to be seen in the pre-dialysis clinic, for renal biopsy, iron and erythropetein treatment.
